

Connect the dots between good land stewardship and profitability.

Join the Legacy Landscapes program!

Learn about Legacy Landscapes practice changes and outcomes

The Legacy Landscapes program helps cow-calf grazing operations track and improve their productivity, efficiency, and long-term resilience through better livestock management and grazing decisions.

Participating producers are supported with:

Tailored technical advisory

\$30,000-\$50,000 for new practice adoption

Ranch software & digital insights

How does the Legacy Landscapes program work?

Producers initially meet with a local NatGLC advisor to assess their operation, identify practices and create a tailored plan. Based on the practices selected, producers can receive up to \$30,000 throughout the entire program to implement those practices.

To track ranch improvements, participants will use ranch management software* to collect basic records throughout the program. At the start and then once annually, producers will submit these records through the Legacy Landscapes Program Hub on AgriWebb. Technical advisors will assist with record submission to make the process as simple as possible.

The participant's permissioned and submitted data will enable Regrow to report on sustainability outcomes.**

For the complete list of data points to be submitted annually, see the other side.

*AgriWebb is the preferred software for Legacy Landscapes. When used, your daily ranch records flow straight into the Legacy Landscapes Program Hub, making annual data submissions quick and easy. With other platforms, manual data entry is required.

**Your data, your control. Always.

All records captured in AgriWebb are fully owned by the rancher. Once annually, producers will permission specific records to be shared through the Legacy Landscapes Program Hub. Only after this approval are records automatically shared with Regrow for sustainability outcomes reporting.
